

Trout Goggles: Trout's eyes work separately. Try these goggles to get an idea of how that would be.

1. Cut out both trout. (Or fold first (#2) and cut both together.)
2. Place the two cut out trout together to make a two-sided trout.
3. Staple on the line in front of the dorsal fin). Staple the heads.
4. Fold on the lines so the tails bend out for the "Goggles".
5. Test the eye placement. Cut out the holes so you can see.
6. Try them on. Adjust and add a back strap if needed.
